But with the vast variety of designs and styles accessible nowadays, how can a homeowner know which is best? So let's talk about the pros and cons of various common pergola designs that you can decide who is accurate for you.

When it comes to design pergolas, are in part relates to the materials used in its construction. The choice of the most common materials is wood, plastic or metal. Each has its own advantages and disadvantages. Let's start with the wood, which is undoubtedly the choice of the most popular materials. When buying or building a wooden pergola, the most important consideration is the type of wood used. Redwoods, such as cedar, are preferable because they are naturally resistant to rot, decay, and insect infestations. If building your own pergola, you may want to shy away from treated woods, particularly if the structure will be used to support climbing plants. The chemicals in treated wood can poison and kill some types of plants. When constructing the pergola, be sure to use stainless steel fasteners that won't rust.

Plastic Fences, although not as rustic and traditional looking wood, can offer a more elegant and polished. The main advantage of plastic over wood is longevity. Where the wood will eventually disintegrate, plastic does not. A high-density vinyl is the best option for long life and time. PVC vinyl can be a particularly good option, because of its extreme robustness. The other important consideration in vinyl products used outdoors is UV resistance. Find a plastic containing a UV inhibitor to prevent the material that changes colour when exposed to strong sun.

The metal material is another option that offers a completely different look and style. Metal pergolas are quite expensive and they are high level of strength and durability. Cast iron is a metal option, but is very heavy and oxidized when exposed to the elements. Aluminium is a better alternative because it is lightweight, but still very strong. While shopping for aluminium pergolas, be certain to ask about the degree of rigidity of the metal.

Apart from the selection of the material, another important factor in the pergola style design, decks is the structure. Pergolas usually have classic straight lines with a Craftsman style, but there are a multitude of design options currently available. Determine that the design is right for you and your garden is a strictly personal choice, but must be affected by the style of your home and garden. A colonial house with English garden is a perfect place for a traditional pergola. If you live in a modern house with a Japanese garden, look for a pergola with a design inspired by Asia. For the Tuscan-style homes, find a Mediterranean style pergola.

Lastly, when faced with the decision of whether to buy or build your pergola, be sure to take into account the cost of your own time. If you are someone who enjoys DIY projects, has a good inventory of tools and works well with your hands, then building a pergola or louvers can be a relatively easy project that you will enjoy. On the other hand, if you want to have a finished product as soon as possible and not very experienced in construction, you can probably save time and frustration by buying a kit ready to assemble. Whatever your choice, a pergola is a great architectural detail to add to any landscape. Whatever your choice, a pergola is a great architectural detail to add to any landscape. With a little forethought and planning, you will end up with a beautiful end result that will serve as a focal point in the yard for years to come.
