Types of self-storage units for storage purposes by [Graceselfstorage](#)

Article published on August 10th 2012 | [Home Improvement](#)

There are various self-storage facilities that are offered to cover storage of certain items that are supposed to be kept in a shed or garage etc. And then there are some store self facilities that offer indoor storage and is designed specifically for housing the items in-house. Therefore, the choices are not just limited to mini storage units, but also to storage building that can house your furniture, vehicles perhaps your boats and yachts as well when you are not on the water. You can also get customized self-storage for your various storage needs. There are moving boxes also available on rent and on sale where you can store the excessive items that you want to keep with you, but don't have enough space to keep.

Storage building range in various sizes and can be made easily available whenever required. For an average person a storage building will come with no features but just rooms to keep your stuff and a garage kind of a door to ensure security. There are also some storage units that are medium in size and are built of concrete with the garage kind of an iron door again for the best security to your valuable things. The temperature of the storage units varies with the season. If it's summer then the storage can be really hot and in winters it can be equally cold, in fact, freezing. Such storage units are ideal for the storing items that are not really affected by the changes in temperature.

This does not mean that you can't store things that need climate control in such storages. There are climate control storage units that are also available. For instance, there are self storage wine units that can store your wine for as long as you want. These self storage wine units will tell you how many bottles will fit into each unit and how much temperature will these wine bottles require. The sellers will tell you to set the unit at 24 hours and 7 days per week for wine, and should maintain the right temperature around 55 degrees Fahrenheit.

Now obviously this type of special self-storage will come costly than your standard store self that can't maintain temperature or doesn't have the feature of climate control. Climate control storage building or store self will probably cost a little more if it's designed for specific purposes, like wine self-storage units that can maintain temperatures at different levels.

Storing wine isn't the only feature of temperature control storage. Think what if you need to store furniture and that too wooden furniture. For instance, you could store your wooden furniture easily in a regular self-storage unit that has temperature control and that can vary widely according to the climate. Else you could also pay just a little extra amount and store your furniture in climate control storage, which will be much better when it comes to the protection of your furniture investment. You might think that your wooden furniture would not be affected much by heat or cold, but climate control storage doesn't just control temperature. These units also control the amount of dust particles that are present in the air by their very nature.
