Simple kitchen makeover tips by [Smith](#)

Article published on July 6th 2012 | [Interior Design](#)

It is extremely tough to do up the kitchen area effectively since the area is used extensively and needs to be very clean and organized. It should not only be efficient but should also be warm and comfortable. What are the ways in which the kitchen area can be transformed in a way that it provides the user comfort and the feeling of warmth? Since, it is not always possible to drastically breakdown the kitchen area or any area of the house for that matter to create something afresh, here are some ways that a person can take care of, to effectively create a kitchen space that's nice to work around in, by just making some basic changes in the area-

De-clutter the area. Cut out all the chaos from your kitchen. Throw away all that's unwanted- be it old appliances, extra utensils, crockery that you don't use, empty spice and pickle bottles and jarsâ€¦anything! Just remove all the confusion in the area and de-clutter your kitchen to make way for fresh décor and elements to be brought in!

Organize your kitchen. Do not just randomly put stuff wherever you like, instead, of having your kitchen items all over the placeâ€¦compartmentalize! Categorizing different storage spaces for different kitchen items is the key to organization.

Clean up the kitchen! Do not let the stale food items stand for too long in your kitchen. Check the expiry dates of all the spreads, all the jams, jellies and things time to time and throw away all that's old and unfit to eat. Use covered dustbins and wipe off all the stains from kitchen spaces immediately. Cleaning the kitchen would add a positive energy and would also keep the area high on hygiene.

Take care of that heat! Kitchen area generates heat a great deal. To avoid the feeling of stuffiness and rising temperature install an electric chimney. Also, using light curtains and ensuring proper ventilation would help greatly!

Install easy to clean laminate counter top in your kitchen. Laminate counter top is a better choice as compared to conventional counter top as laminates add life to counter tops by securing their surface against bacterial growth and rough usage. These laminates are high pressure laminates that sustain the extreme conditions in kitchen areas. There are Greenguard certified laminate solutions offered in the market these days that one can opt from and make the kitchen an environment friendly zone.
