How can businesses benefit from Leased Lines? by [Peter D](#)

Article published on May 25th 2012 | [Internet](#)

Organizations that require a dedicated communication platform have several options to look forward to. Among them going for a leased line service is not a bad choice. This service has been especially formulated for enterprises that require a fluent and a strong corporate communication structure for video conferencing and voice over Internet protocol (VoIP) as well as for large data transfers. Organizations with distant offices are among the biggest groups that usually go for this dedicated service. Businesses that have geographically distant branches can effectively communicate without any disturbance through this dedicated line.

Most businesses now prefer to go for Internet Leased Lines in India, as it provides them with several benefits and opportunities to excel. In fact these have become very common among businesses that require dedicated internet services. A leased line is made up of fiber optics and copper wire which can transfer data at a very high-speed. These lines are considered very fast in comparison to other conventional internet connections.

This service is hugely different from a standard digital subscriber line (DSL) or cable Internet. A cable internet connection or a DSL connection is usually shared among users, which leads to slower speeds during peak hours as the bandwidth is divided. On the other hand, ISP Leased Line allows customers to use the entire bandwidth as stipulated in their agreement with the service provider. The speed on these dedicated lines is guaranteed at any time of the day.

The only drawback of this service is its pricing. Installing a leased line is significantly more costly in comparison to a regular internet connection. These lines are most suited for enterprises that need dedicated internet bandwidth all the time to manage critical programs and applications. For an individual installing a leased line can be very expensive, as the prices of these private lines vary upon the distance covered to connect the user to the service provider.

Most medium or small-sized businesses give leased lines a miss, mainly because of the economic reasons. Large enterprises that can afford to bear the high-cost usually opt for this dedicated service, while smaller organizations go for other cheap alternatives. Multi-nationals or big companies use this connection to stay connected with its other offices and to transfer data. These dedicated lines are now easily available in all leading metros of India. Internet Leased Lines are available in Mumbai, Delhi, Bangalore and Chennai among other cities.
