T1 line service increases business stability by [DANA BATES](#)

Article published on April 4th 2012 | [Internet](#)

Businesses are all dependent on the internet and its ability to transfer information fast and efficiently. Communication systems keep changing with time and as they do, their ability to work even better also increases. T1 line is one of the most recent technologies that utilize fiber optic cable in order to transmit information. T1 lines can be used for voice channeling and for data transmission. It can take up to 24 channels of voice and can transmit data at the rate of 1.5 megabits per second. When it is used only for voice calls, a T1 line is hooked up to the phone system of the office or residence but if it is to be used for data purposes, it is connected to the network router itself.

With the ability to carry data at speeds of up to 192000 bytes per second, this system is far much better than using a regular modem. It works almost 60 times better than the modem. For your business to proper and meet the goals that you have set for yourself, you a very reliable internet connection. The T1 line connection is much more reliable than the modem or any other connections. This kind offline also has the advantage that it can be shared by a good number of people with great ease.

What is the cost of a T1 LINE?

A T1line may vary in cost depending on a number of factors but generally the cost ranges between \$1000 and \$1500. This is the general cost per month although depending on where you live and work it may vary slightly. The T1 line is much better than the DSL or other systems because it is not location specific. It can be used anywhere. It is always function with almost no interferences and you will therefore never incur costs in finding an alternative connection when it is down. It is always running. If you are a phone Carrier Company or a cable company, the T1 line will suit your business perfectly because it is a foundation for upgrading and using systems such as mail and web services, VOIP services, VPN for many users and Citrix services. This reduces setting up costs for you.

Why T1 line services are the best option

Depending on what kind of business you are running, T1 line will offer you connectivity like you have seen nowhere else. It gives you the chance to privately own and use a network unlike the DSL connections. With this kind of network you can get T1 point to point connections that will allow you to extend the connections you have both internally and internationally. If you are just starting off on a new business, this is just the kind of connection you will need to launch and become stable.
