The Most Sporadic Elements of Nature-Colored Diamonds by [Ray Ban](#)

Article published on July 23rd 2012 | [Jewelry](#)

Colored diamonds are very rare and very much valuable. This statement is enough to attract the hearts of all the women. A colourless diamond is the purest form of a diamond. In the past people choose their diamonds on the basis of their purity but the culture has now changed. Purity does not matter until the Diamond is attractive, rare and valuable.

Diamonds are found in many colours: gray, white, red, green, pink, blue, yellow, orange, purple, brown and black. Though red diamond is the rarest, green diamond is the most valuable. Though pure diamond has no colour and is transparent, in reality no gem sized diamond is perfect. When most people think of coloured stone jewellery, their minds turn to rubies, sapphires, and emeralds but they forget that the most beautiful, brightest, and durable gemstone of all is the Diamond.

Colored diamonds are an allotrope of carbon where the atoms form a crystal matrix giving the gem a proper structure. But who cares - All we care is that diamonds are "Women's Best Friends". No woman or girl will remain upset after being gifted a diamond. Diamonds are very hard in nature. They cannot be cut easily. It takes a lot of pain to make diamond jewellery. Not all the people know that the most beautiful diamonds in the world come in an array of colours. Colored ones occur naturally. They are not polished or modified to enhance the colour.

Green diamond acquires its colour due to the effect of radiation. Green Diamonds are also termed as Dresden Green Diamonds. These diamonds were given as a gift by the emperors of one kingdom to another in order to get protection for their kingdom. The country of their origin is India, first found in the Kollur mines of Andhra Pradesh. The best piece of the Dresden green diamond is displayed at the "New Green Vault" at Dresden Castle. It is a very valuable jewel.

Green diamond does not only look exotic but also have a huge religious value. People all over the world worship this diamond considering it to be a jewel of Lord Zeus "The God of Lightning". It is said that Perseus, the son of Zeus and Danae, a demi god threw the stone towards the sky which came back to him in the form of a Unicorn. Hence the Green Diamond is said to be as pure and rare as a unicorn and considered to be very precious.

All the different colored diamonds have their own importance and value, apart from having elegant look. These colored diamonds are really rare and are very expensive. It can cost a person his whole fortune to buy one. But if he possesses any such diamond, he becomes an elite person. A person with any of these wonderful, precious, beautiful jewels becomes unique.
