Make Sure You know about College Testing Dates by [Charles Royce](#)

Article published on June 21st 2012 | [K-12 Education](#)

Assuming your high school son or daughter plans to take college admissions and scholarship tests, it's imperative to be on top of the registration dates for every single one of those tests. Delaying until 12th grade to take the SAT or neglecting the PSAT during junior year can handicap your son or daughter's college admissions chances, so don't let these testing dates slip away!

Many sophomores complete the PSAT (Preliminary Scholastic Aptitude Test) for practice, but 11th grade is where the PSAT really counts for scholarships and college recruitment. Registration frequent begins in May, while the test is taken in October. Be sure to get in touch with the test-taking space you will be working with soon enough to secure a spot on their list -- in certain cases they have limited placements available.

The SAT is best taken during your high school student's junior year, during the spring. This enables them to retake it in the future if they are not comfortable with their scores, and also helps them to establish advantageous college choices dependent on their test scores. If you wait to take the SAT until senior year, which is when your student ought to be focusing on college and scholarship applications, they'll be pressured for time and more than likely won't perform as well on the test as they might have if they'd taken it before--so don't delay!

To make it possible for your pupil perform their best on college admissions tests, add test preparation into your homeschool educational program after your child has completed geometry. Geometry is incorporated on both the SAT and the ACT, therefore if you include test preparation earlier than this, they might get frustrated because they haven't learned geometry yet. As you prepare for the tests, I recommend that you utilize real tests for practice, working with sources such as the Princeton Review materials.

On top of helping your son or daughter obtain college admissions and scholarships, test preparation can make it easier to measure your student's potentials and merits. This is very important as they determine appropriate college level classes, and can even show the possibility of receiving college credit while still in high school. If, for instance, your student scores incredibly well on the math segment of a test that could indicate they understand a college-level quantity of math, which can be evaluated by completing a CLEP or AP test. High test scores are also an outside certification of your student's homeschool grades, which quite a few colleges would appreciate as they consider your homeschool records.
