The Remarkable Retina Display of iPhone 4S by [John Henry](#)

Article published on July 16th 2012 | [Mobile Phones](#)

In your mind blowing iPhone 4S you would find the most vibrant and sharpest feature. And the highest resolution phone screen ever is the Retina Display. So in other words you can say that a human eye is incapable to differentiate individual pixels because the pixel density in this gadget is very high. The smart also offers a crunchy text, pointed graphics, and eye-catching images. Looking into all these features you would find yourself completely lost in this handset. Whatever you see read or do in your iPhone 4S looks stunning and all the credit goes to Retina display.

This is due to the reason that the pixel density of the Retina display is so high that your eyes cannot distinguish the individual pixels. This simply implies that web pages, text in books and email are crunchy at any size. Moreover Imagery descriptions in games, movies, and photos explode off the screen and everything seems to be sharper. The engineers of Apple able to set four times the number of pixels into the 3.5-inch display screen accessible on iPhone 4S and iPhone 4 and the developing pixels are mere 78 micrometers wide.

All the text and graphics seem flat and constant at any size that is due to the 326 pixels per inch. The Retina display is amazing from all the sides from everywhere you look. The technology used in Retina Display is called IPS (in-plane switching) and the similar technology is employed in the Apple LED Cinema Display and iPad for attaining a wider screening angle than on typical LCDs. This implies that you would get a brilliant picture by holding your iPhone at any position.

It's a perfect gadget while sharing the photographs with your friends or moving your gadget around whereas playing a dynamic or flying game. With the help of Retina Display whites are brighter, black are dark and everything seems to be very beautiful as it offers four times the contrast ratio of previous displays. The glass of the retina display is chemically stronger for making it harder, durable and scratch resistant. The materials used in making a Retina Display are used in helicopters and high speed trains. It also highlights an oil-resistant coating which helps in keeping the screen neat and clean.
