Hire an Offshore System Administrators by [Rajeev Ranjan](#)

Article published on May 21st 2012 | [Networks](#)

A system administrator is a very important resource of a company. He/she is usually responsible for maintaining, upgrading and setting up system and networks. A system administrator is usually the member of the IT department of an enterprise. The primary responsibility of a system administrator is to provide a steady and secured IT environment for smooth functioning of business and network. It is very difficult to typecast the role and responsibility of a system administrator as the tasks assigned to a system admin vary depending upon the size and scope of an organization.

In smaller organizations, a system administrator may be expected to perform less complex duties namely installing software, creating file system, updating systems and creating backups. However, in large IT setups, system admins are in charge of supporting and maintaining servers, ensuring security and functioning of database management systems and executing day â€”to- day system maintenance and security setups.

Maintaining and securing IT environment is quite important for efficient business process and operations. Therefore, there is a constant need for enterprises to hire system administrator in india india in india with rich industry experience and product credits. For small and medium sized organization having full fledged system administrators on regular pay-rolls is an expensive proposition. In US and Europe, system administrator are very expensive as a resource and depending upon his/her experience and scope of the job could cost anything between 150\$ -250 \$ a month.

Resource optimization and cost effectiveness is the cardinal rule of any business operation. To extend the same advantage, many offshore companies prefer hiring offshore system administrators. There are several benefits of hiring an offshore system administrator. An offshore system administrator costs nearly 60% less in comparison to an onshore resource. Improved IT infrastructure and communication channel have profoundly supported the cause of outsourcing IT talents from offshore location. A remote system administrator can perform a wide range of jobs, as under:

- â€” Executing Windows, Linux, Solaris administration
- â€” Maintaining user account
- â€” Installing and maintaining software
- â€” Tasks related to file management system
- â€” Managing software site licensing
- â€” Supervising and reporting system performance
- â€” Safeguarding network and systems for virus and hackers
- â€” Troubleshooting reported problems
- â€” Troubleshooting and configuring the peripherals
- â€” Creating system backup and recovery plan

â€¢ Monitoring network communication

Outsourcing system administrative services is not a new trend. Hiring a dedicated system administrator from an offshore location can give your business operation a much needed impetus and support at a very reasonable price point. Most outsourcing agencies are remotely located in Asia. Countries like Philippines, Sri Lanka, China and India are favorite outsourcing destination for varied western clients and companies. The IT infrastructure and technical expertise offered by these markets are high in terms of quality. Amongst these countries, India is ruling the charts. There are several benefits that an enterprise derives when it hires offshore system administrators from India. Some of the advantages are stated below:

â€¢ Rich industry experience

â€¢ Excellent communication skill, in particular proficiency in English speaking, reading and writing ability

â€¢ Round the clock support

â€¢ Improved communication and IT infrastructure layout
