Signs of a Healthy Red Eyed Tree Frog- Check Whether Your Pet is Healthy by [Redeyed](#)

Article published on January 19th 2012 | [Pets](#)

Red eyed tree frog is fast becoming the favorite pet and is seen in almost every second house. The pet is most familiar by its bright green skin, orange feet and bulging red eyes. Health is highly significant for any pet. If your red eyed tree frog is healthy, you will get to spend some beautiful moments with him. A healthy red eyed frog is easy to spot, as they are colorful, watchful and quite the remarkable jumpers. If you have one as a pet, you should know the signs of a healthy red eyed tree frog.

When you see a healthy red eyed tree frog, the first thing you become aware of is its bright red eyes. The eyes should be alert and not appear to be cloudy. If you notice any change in eye color or brightness, it's time for you to understand that the frog may have Cloudy Eye or there could be a basic problem, such as immune system failure.

Signs of a healthy red eyed tree frog are evident on their skin. The frog's skin should be bright green and free from any scrape, bruising or spotting. The red eyed tree frog's skin is very fragile and can succumb to bacterial or fungal infection very easily. A red eyed frog's skin will transform color to become accustomed to its environment, so a minor change in skin color is probably normal. If you see redness on the frog's thighs or belly, this could be Red-leg and can be fatal.

Another sign of a healthy red eyed tree frog is that its underbelly should be white to pale yellow and its sides are supposed to be striped blue and yellow. Its feet should be bright orange. The skin will be damp and very porous, for this is where the frog soaks up water. The average red eyed tree frog is 2-3" long, with the male tending to be smaller than the female. They should come into sight at a healthy weight. They should not have palpable bulges nor should they be tremendously thin. This could be the result of disease or simply undernourishment.

Supplementary signs of a healthy red eyed tree frog consist of a clear nose and effortless breathing. If you notice the frog struggling to breath, it may be in the advanced stages of a disease. The red eyed tree frog should be vigorous and alert at night during its normal feeding time. The best way to prevent your red eyed tree from getting unwell is to keep its habitat very hygienic, provide clean water and well-supplemented food on a regular basis. Do not hold the red eyed tree frog, as they can pick up dirt, debris and bacteria from your hands.

Learn to be familiar with the signs of a healthy red eyed tree frog so that you will know immediately when there is a dilemma. The earlier you catch an illness in the frog, the better probability of its endurance.
