Turn to a Structural engineer for proven project advice by [Mary Porter](#)

Article published on June 19th 2012 | [Real Estate](#)

Wait a minute, before you put the finishing gloss to renovation projects are you sure that your Structural calculations are correct? Can you be certain that your renovations will conform to building regulations or is there a chance that the project could be doomed before it even begins?

Why take a chance when a Structural engineer will be more than happy to provide you with all the Structural calculations that you require. Arrange for a Structural engineer to visit your site and they can provide all the necessary advice you need to ensure the project runs without a hitch. A Structural engineer provides a first rate consultancy service producing statements, calculations and drawings on behalf of the client. The information provided by a Structural engineer can prove to be crucial if you plan on undertaking a renovation project in the future.

Find out if it's feasible

In theory those structural alterations shouldn't be too complicated, I mean, what could go wrong with the project? It could be a case of famous last words if you don't ask a Structural engineer for Structural calculations at the beginning of the project.

A Structural engineer will provide you with detailed inspections and they'll hand you a report that clearly indicated the complexity of the project. Armed with the information from the Structural engineer you can begin to prepare for the costing and the design of the project. You'll know exactly where you stand once a Structural engineer has visited your site and provided you with a plethora of useful information.

Forewarned is forearmed

The services of a Structural engineer can be used for a variety of purposes and apart from providing Structural calculations for development projects consultations can be provided for any number of applications.

A Structural engineer offers design services to clients and they'll undertake structural inspections for home purchases as well. Buyers can establish whether a property is structurally sound following a survey by a Structural engineer.

So whether you are changing the use of a building or want to renovate a dilapidated old barn a quick call to a Structural engineer could save you time and money in the long run.
