A Benchmade Switchblade from BladeOps - Made to Last by [Fred Lannister](#)

Article published on January 10th 2012 | [Recreation](#)

If you're planning on investing in a knife you can own for you all the time, then you definitely should purchase one that is made to last. Top quality switchblades might be strong enough to be carried along with you and removed any time you must cut something and you'll never need to replace them.

A benchmade switchblade is among the best types you may get because of the overall thought put into the build. The handles have special lines so they're extremely easy and comfortable to hold, and also the blades themselves can be made with plain, serrated, or combination edges. Either way, they're made out of enhanced tip strength also to absorb shock which means that your hand won't be expected to.

Anybody which has never purchased a knife before might be baffled by the vast number of options. There are aided, folders, out the front, and fixed type blades. Both have different purposes, however automatic, or switchblade varieties are perhaps the most versatile. For that reason, they are a great spot to start.

The benchmade switchblade models were made to be easy to work with. They already have firing mechanisms built inside which means you simply have to push a control button to reveal the blade. Once it's open, the mechanism will even maintain it in place, allowing you to cut through whatever you want to with ease. With thanks to the ergonomically designed and grooved handles, you should have little difficulty holding the knife, even when the hands get sweaty.

Have you ever checked out a benchmade switchblade? Whether you've seen one with a satin done blade or a dark stainless-steel one, it's difficult not to see how expertly crafted they're. They're not just great to consider, though. Their anodized lightweight aluminum handles and efficient mechanisms make them very simple to apply.

Benchmade incorporates a specialized AXIS system within their automatic knives that's patented which means you won't see it anyplace different. By pushing a control button up, the blade will shoot out. When you are done using it, you just need to push the button down, that should allow you to fold the blade up and pocket it.

Having a solid knife which you can carry along with you and use in case of emergencies is one thing everyone should consider. Who knows whenever you should trim your way out of any jam, and also, since modern knives are extremely sleek and lightweight, you'll not even notice them inside your back pocket.

A benchmade switchblade is especially straightforward keep concealed all of the time. If you really need to cut something, you just need to push the button and the extremely durable blade will come up and lock into position. Every design precaution have been taken so that you cannot accidentally cut yourself while using one, which makes it a great gift to give someone as well.
