Motorola Portable Radios – Enhancing Communication [Randy James](#)

Article published on July 5th 2012 | [Satellite](#)

Motorola, the leading name in communication networks, has designed the portable two way radio to enhance communication and simplify life for organizations and its people all over the world. Motorola portable radios are not only sturdy and practically indestructible it also affords exceptional call quality and a wide coverage. These radios are an essential necessity in most organizations that relies on communication in their daily operations. Moreover, making it portable lends it an added character.

A two way radio ensures that users are able to receive and transmit messages through the same device. Two way radios can be mobile, stationary or hand held. The handheld versions are also called walkie-talkies. The radios are available for three primary categories of users, namely public safety personnel, business users and general consumers. Customers, irrespective of the category they belong to are able to focus on their objective leaving technology in the hands of the leader.

The portable two way radios for public safety personnel are designed to deliver interoperability, intuitive performance and excellent call quality. It is equipped with the GPS functionality and has the capability to integrate voice and data. Motorola portable radios are also made available to the business section. These facilitate business leaders to establish effective communication with their resources while traveling. The portable two way radio product range for the business section offers wide area coverage essentially to cover communication needs of personnel who are frequently traveling or for those who do not have a desk job. The portable two way radios for the general consumer section cover a wide range of products. These are primarily targeted towards the people who indulge in outdoor activities. The Motorola portable radios are designed to work in remote areas and in rugged terrains.
