Advantages of Having an Electronic Water Descaler by [Julia Roger](#)

Article published on May 14th 2012 | [Shopping](#)

There are various advantages of having an electronic water descaler at your home, as it is used to remove limescale deposits caused by hard water. There are other methods like magnetic descalers and ion exchange softeners, which are also available, that are a bit expensive and have no comparison. However, an electronic one can effectively reduce scum in sinks and baths. It is a Low cost solution that softens water by using chemical and assists you to maintain pipe-work in your house, including storage tanks, boilers, showers, radiators, and washing machines.

Electronic water descaler, also known as electronic conditioners or lime scale inhibitors, generally comprise of a compact box of electronics and one or more coils wrapped roughly on a pipe. These descalers are much cheaper in comparison to any other hard water treatment solutions and offer a cost effective solution to lime scale problems. It is very easy to install and no plumbing is required. Healthy minerals of the water are retained and the water remains safe and healthy to drink because nothing is added or removed to the water like salt or chemical. It keeps the water clean and healthy if incase any infant accidently gulps it down.

Though magnetic descalers are available in abundance, an electronic descaler is much more efficient. This device connects to the central water supply pipeline and makes use of radio frequencies or audio to avoid mineral build-up without the use of chemicals or salt. Audio frequencies are most effectual and do not obstruct with radio or TV reception. The hard water is not dangerous but can disturb the plumbing and can create cleaning problems frequently. There are many options available online where you just have to choose the best one for yourself in few of clicks.
