Selection of the Right Oxygen Concentrators by [Jamesreckh](#)

Article published on May 24th 2012 | [Shopping](#)

It is highly essential to make sure that the oxygen concentrator chosen is perfectly matching the requirements of the intended beneficiary. This is because most of the people will be fine with oxygen concentrators used by them when they are doing simple works at their home since the concentrator does not cause any strain. However, when it comes to selection an oxygen machine for a person, who does more workouts, who fly frequently and who suffer from some problems like apnea, selection of an appropriate model is highly essential. Some concentrators are approved by FFA in such a way that they can be carried easily; on the other hand, some are not approved due to their heaviness. In addition to the activities, breathing habits of individuals should also be taken into consideration when they wish to choose an oxygen machine.

The body of each individual inhales differently and when selecting the concentrator, it is essential to consider how much oxygen is released by the machine per minute and the easiness of adjusting this number. Another point to consider is the charge received by the concentrator and its capacity to maintain it. Both electrical cord and battery chargeable models are being offered and therefore, before selection of a model it would be wise to go for one that suits well with the lifestyle of the user. To decide upon the oxygen craving capacity of an individual, the best way is to use an oximeter, which can determine how much oxygen is craved during a number of activities by monitoring the flow of blood.

Another point of consideration is the future of user, for instance, if the user need portable oxygen concentrator due to his degenerative disease, he should go for a model that meets not only his current oxygen requirements, but his future oxygen needs as well. This means that if he anticipates that he will need a concentrator with continuous flow, it is better to go for a model with different modes like sleeping mode and pulse mode. Irrespective of the situation, the right concentrator can be selected these days since there are reliable dealers selling portable oxygen concentrators of different manufacturers. Most of the manufacturers offer three to five years warranty for the concentrators and they aim at making it easy for everyone affected by respiratory illness for maintaining highest possible quality of life.

So, select a right model oxygen concentrator and enjoy a safe life even when you are on the move!!!
