What You Need to Know About Portable Air Conditioner by [Cullen Nedrich](#)

Article published on July 11th 2012 | [Shopping](#)

First things first, you have to justify your need for an air conditioner. Buying one is not a joke as it may take a huge amount from your pocket. Some of the things that you need to consider is the climate where you reside, your capacity in paying electric bills, water source, and your willingness to maintain a unit. After you weigh things and still decided to pursue, they it's time to purchase one. A portable air conditioner is different from a mounted type in many ways. Apart from being portable, the cooling mechanism will require the help of water or ice. This is why water source is very important. There is considerable savings in terms of power consumption when using a portable aircon hence, lesser electric bills. The maintenance is more complicated than that of the mounted type since you have to clean a lot.

Where to Use

Portable air conditioners are commonly used in the offices. Household can also use this but for the sake of comfort and convenience, mounted types are recommended for household use. Portable aircon is positioned to targeted areas. In the offices, these are positioned to maintain cooling effect to tools and facilities that can be destroyed is heat attack them. These are usually the computer servers and other electrical tools. This type is of various sizes. So it can also be used as cooling equipment to outdoor events such as weddings, sports matches, and many more. Shipping companies that delivers perishable items also use portable aircon to avoid spoilage.

How to Maintain

It has various parts that need regular maintenance. You need to ensure that the drainage hose is cleaned always. This is where the water will pass in and out of the unit. Your water drainage must also be clean since this is where hose is connected. You need to check for damage especially if the drainage hose is made of plastic. You can do cleaning of the hose once a week.

When it comes to filters, it is recommended that you clean this twice a week. Since it is the primary passage of air, it can also be a passage of the dust, bacteria, and viruses. Don't allow it to be the source of any disease that will create bigger damage not only to things but to people around.

Wiping the exteriors will also prevent dirt to stick. Daily wiping is required. When not in use, storing it to a cool, clean, and dry space is a strict requirement. If you want your portable air conditioner to last long, make sure you store it to a safe room.
