Auditing ADFS and Additional Abilities of Supplementary Federation Service Software
by Claire Hayse

Article published on June 29th 2012 | Software

It is not surprising why many organizations nowadays select to utilize complementary software for federation service because it is proved to be an efficient way of extending the capabilities that ADFS has. While some companies are working with stand alone programs, they may be not maximizing what this service can supply because of its limited functionalities that make it incapable of auditing ADFS.

It is actually for this reason why many companies are making sure they use the appropriate complementary computer software which works on authenticating and auditing customers specially in their activities while achieving added degree of security.

Before you consider getting this type of program, it truly is crucial first that you simply know how federation service software works and what its important functions are. A fantastic program to complement the capabilities of federation software is one which can supply security into the existing ADFS deployments. These applications should offer you multiple purposes apart from auditing for AD FS, although it must be noted that the complementary computer software is created to perform authenticate and audit users coming from different locations.

The added feature it has include prevention of DoS or Denial of Service attacks, which can be quite common when the organization is implementing federation service in their environments. Finding the AD exposed to DoS attacks can bring about lots of challenges that could have already been otherwise prevented when the correct complementary computer software for ADFS is used. The computer software can act as cloud firewall which can help maintain the accounts in the Active Directory unlocked.

For companies and business organizations that have to audit records with comprehensive user details as well as the claims revolving it such as the authentication time may also make use and advantage of complementary computer software for AD FS. It really is through this that the organization can obtain complete and total auditing for ADFS. The administrators are going to be able to receive emails as well as other notifications efficiently in situation attacks like DoS along with other similar events happen.

There are quite a few capabilities that a complementary federation service plan can present and all of these are stated to be valuable. From preventing DoS attacks to authenticating and auditing AD FS and giving flexibility in performing these functions, the use of this software is proved to become completely advantageous.
