Autopilot – a Way to Trade Your Mini Dow [Lan Turner](#)

Article published on December 22nd 2011 | [Software](#)

Among the most common methods for futures trading is to enter the Mini Dow index. The Mini Dow is in fact a smaller version of the futures contract, that allows small or solo investors to start trading, which they might not be able to do with the original Dow Jones Index. The Mini Dow could usually shadow its better relation, rising the way it rises, and falling as it falls. Having the ability to use the Mini Dow for futures trading may help you to make money even if you do not have a huge investment portfolio at the start.

There are three ways in which you can start participating in futures trading using the Mini Dow. In the first way, you may need to get a good understanding of Trending. You can follow the trends in the Mini Dow, starting with the formation of the trend and then following it until it starts to slow or reverse. The cash is made through quitting the trend before the rising ends, however before the costs begin to go in reverse.

Another example of the futures trading that you can do with the Mini Dow is known as the Breakout. Such type of trading works has a small cost movement as trades go back and forth, until a large amount of orders make the trading price shoot up. The volume of trades' acts like rocket to the Dow Index prices, and this is often when the income could be made from that particular sort of trading.

The third customary way of getting money from the Mini Dow is through the use of support and resistance trading. This is perhaps the most popular kind of the Mini Dow, due to its reliability. Traders should spot the trading ranges of the Dow Index and then find price points sustaining the longer entries, and resisting shorter ones. This is the support and resistance trading of the title.

Any of those ways of futures trading can be employed by the beginner, however so as to obtain a real insight into how to handle such kinds of investment, it would be prudent to have an automated system which will allow you to trade in autopilot. Similar to the best Forex software, such systems are designed to let you set yourself up as a trader, and start on the Mini Dow. Press one button and you may create an auto-piloted trading strategy that would function even when you are not at the computer, click another and you may quickly find the best trading options for your specific strategy.
