Have you ever thought “what makes Microsoft so popular”? With every soon to be released version people are eager to know what it bags this time. “Sales” is not a concern for the brand, and the vendor knows it well, rather it focuses on usability and the corresponding simplicity to achieve that. In the journey of Windows operating system you would be fascinated with the kind of repair and maintenance tools that it shipped. These are so simple that can be easily used by a layman who even doesn’t know to define computer. User-interface of the Performance Information and Tools, the Windows Experience Index, and ReadyBoost , Action Center, Windows Restore Utility, etc. is enough to exemplify the fact. Most of the tools are available with the Windows Control Panel. Performance tool will help you to adjust visual effects, indexing options, power settings, customize startup and remove unwanted programs to optimize your machine.

Disk Cleanup and Disk Defragmenter are to complement the tool. You can delete unnecessary or temporary files from your hard disk and sync fragmented files to create extra room for demanding applications. Microsoft Fix It is a great way to fix computer problems especially those with Microsoft products. It covers all problem areas related to programs & files, games, music or sounds, pictures or video, Internet or networks, software installation, update and upgrade, print, fax, scan, share performance, etc.

For accessibility, need to create an account with the Microsoft Fix it Center, which is an online portal that percolates important system troubleshooter for your PC as per requirement. The tool is easy to install and run. Fix It Center scans your device to diagnose and repair problems, and then gives you the option to "Find and fix" or to "Find and report". Windows built-in System Maintenance troubleshooter available with Control Panel can also put an end to performance related issues.

Microsoft Support also houses relevant knowledgebase and video tutorials that is segregated into tabs such as Windows, Microsoft Office, Internet Explorer, Windows Media Player, Windows Live, Windows Phone, Security Essentials, Xbox and Games and more, each of those are again categorized into versions and modules of support. The portal exclusively describes the usage of advanced system tools, such as Event Viewer, Disk Defragmenter, and System Information, those system administrators and IT professionals often use to solve problems. Unravel the Windows Experience Index report and see how the computer's hardware and software are playing the role. A higher base score generally means that your computer will perform better and faster than a computer with a lower base score.

Microsoft Help services have been extended through Microsoft Certified Partner Network. Businesses and enterprises those having desired infrastructure and expertise are allowed to run remote support base. Their service is not constrained by geographical boundaries or computer make and model or the warranty period. They have ventured into the business or server support as well thereby empowering businesses to slash down the IT maintenance budget and stay productive round-the-clock with no downtime.
