What's FLV and Apple TV?

FLV: FLV, short for Flash Video, is used to deliver video over the Internet using Adobe Flash Player versions 6 and 7. It's famous for its streaming capability. It uses chunks. It means it divides the file into smaller pieces, and streams them over the internet. FLV is now accepted as the default online video format by many sites including YouTube, Hulu, VEVO, Yahoo! Video, etc.

Apple TV: Apple TV is a digital media receiver developed by Apple. It is a small form factor network appliance designed to play digital content originating from the iTunes Store, Netflix, YouTube, Flickr, MobileMe, MLB.tv, NBA League Pass, NHL GameCenter or any Mac OS X or Windows computer running iTunes onto an enhanced-definition or high-definition widescreen television.
