Keep an eye on your child with Activity Reporter by [Saanjh](#)

Article published on March 5th 2012 | [Software](#)

Every successful company has unique principles and strategies that contribute to their success. Such mantra of success plays a major role in achievement of objectives of any concern, but at the same time there is always a fear of competitors copying the policies. This is the reason why all major companies are striming hard to protect their intellectual property rights, their formulas of success, secrets & the processes of guarding their secrets. For the same companies are ready to invest heavily in developing & implementing such strong and foolproof mechanisms to prevent any kind of harm or danger to them.

Activity Reporter proves to be a very important tool for companies to monitor all the activities of their computer users. It acts like an awesome spying engine running in the background & recording every keystroke & every activity on the computer or internet without the knowledge of the user side by side when monitoring process takes place, screen shot/report is generated on a regular basis.

Features:-

- â€¢ Monitors & record application activities.

- â€¢ Unique features of Activity Reporter to white list & black list application enables the organization to monitor more effectively.

- â€¢ Black list:- applications added will get captured and be visible in alert.

- â€¢ White list:- application added but no activity recorded.
