The Indian footwear industry is one of the prime subsets of the Indian leather industry. It is the second largest producer of footwear, next to China. The leather footwear produced and exported from India includes shoes, casuals, moccasins, sport shoes, horrachies, sandals, ballerinas, and boots. The non-leather footwear exported from India includes shoes and sandals made of rubber, plastic, P.V.C. and other materials. This footwear sector has matured from the level of manual footwear manufacturing methods to automated footwear manufacturing systems. The industry is now growing to adopt modern and state-of-the-art technology, to suit international requirements and standards. The Indian footwear market scores over other footwear markets, because of factors such as reliable supply of resources, good-quality finished leather, and large installed capacities for production of finished leather and footwear. In addition, several other factors such as large human capital with commendable expertise and technology base, skilled manpower, and relatively low cost labor, also play a vital role in establishing Indian manufacturers's™ supremacy over the rest.

Industry automation has led to complexity in processes and increase in the amount of data that needs to be handled. The supply chain in this particular industry sector contains multiple stages and in each and every stage, there are loads of data to be captured and analyzed.

It requires careful analysis and considerable efforts to automate the complete system. At present, the footwear industry faces challenges like unfavorable frequency of orders, changing trends and market requirements, continuous pressure for better value, tighter costs, regulations in different countries etc.

With its robust and highly economical solutions, Ramco's™ OnDemand ERP helps footwear industries integrate all their processes, automate them and control costs effectively. As it is cloud based, it can be really helpful for companies having their manufacturing plants in multiple locations. In addition, companies can save costs in IT infrastructure and maintenance.

RODE Benefits

Ramco OnDemand ERP offers the following business benefits:

• RODE exploits the advantages of internet and computers

• The solution is highly economical

• The solution aids in change management and ensures that the phases are not disturbed. It does not require much modifications and it can be implemented soon.

• The end-to-end solution helps integrate data from many different departments, automate processes, control costs, and respond efficiently to change.

• The RODE system is fully delivered in accordance with the flow of the Leather Industry, combined with production management concepts and materials tracking, which aid every business process in the Footwear Manufacturing Industry

Ramco On Demand is one of the best ERP software solution for leather industry management. Ramco ERP software automates all your business process .
