Nyros Technologies-IT Services and Business Solutions by [Kkndnyross](#)

Article published on August 8th 2012 | [Software](#)

Nyros Technologies is a software development company based in Kakinada, India and is a leading Indian IT services company with a portfolio of business intelligent solutions. And Nyros Technologies has growing in different platforms such as Ruby on Rails, PHP, Dot Net and mobile application in android, blackberry and Sancha...etc.

In FIVE Solid GO's, We Have It All For You!

1. Our first step in building a relationship with our client is to spend a good amount of time in communicating & learning about you, your business status-quo, your needs, your internet familiarities and strategies. We'll in parallel examine to give you concise inputs that help you in reaching end goals. Last part, this will all be recorded and analyzed for the next go's!
2. Next, basing on the level of expertise your app needs and app size, we bring your team of Nyrosians together who can do the best build and keep you in smiles right through. The scrum-team will be leaded by the Project Coordinator ('scrum-master') who'll be in direct contact with you from Day 1. Nonetheless, all the team members play a key role in giving life to your visualization.
3. Wireframing, Work Breakdown Structure (WBS), Storycarding – the three kings of project management, we are in honor for.

Your Nyros team will be called in for multi-brainstorming-sessions to know the real purpose of the project & to keep the project on track and on budget.

The first value over processes and tools is for the team to have a clear understanding of why we are on this work, who we are building for and what (s)he wants?

Next starts the core of our process, the Wireframing: defining users, page navigations, interactions and finally the general layout basing on usability. We put all this in the form of rough wireframes on papers. We finally give you a Visual representation of your website skeleton or blueprint as called.

Basing on your consent on Wireframes, we do WBS & Storycarding. Work-Breakdown-Structure is the project's breakthrough list of To-do's and Milestones alongside with time & effort estimates for firm budget plan.

The Storycarding is again a detailed list of stories of every single interaction that will/might take place in the app. This list makes everything transparent to you of what's going to come up.

This value-driven approach built & stored on Basecamp - our Project Management System (PMS), will give you a complete idea of what's done, what's being worked on for the day and what's

4. The Real Start that you can see and recognize after all the very important Ground Work!

(Y)our designers will work with you to know about your branding and art preferences. You'll then get mockups of all the key pages. The design will be one step ahead of the coding which helps to deliver launch-ready features.

5. Juicing the pulpy part! Set with an organized, fully-realized plan, you'll see our team take on your project with speed, skill, and undeniable flair. You'll see our smiling faces every day for a standup (5

minute meeting) over Skype if you need, and we'll be available whenever you need to chat.

Thanks to Agile approach, the strong (soft) foundation we made helps to fine-coordinate the team with you to meet your needs as they change and grow along with your project.
