Record video with Canon and play Canon camcorder video on mac by [Magic](#)

Article published on July 12th 2012 | [Software](#)

People are purchasing camcorders really to record memories. It is not really about the camcorder but those memories it records and archiving those memories for a lifetime. Video is so important for capturing the dimension of what happened, you know, not just the stills. Stills are wonderful, but the sound that goes with it. You know the sound of a baby's voice, not just a picture of the baby in a crib. Although sure you get all the warm fuzziness you can want out of a photograph. You can relive the moment with video, and that's what a video does best.

But why people want to record video with digital camcorder?

Thanks to the digital age, the pictures we take or the videos we shoot are stored in a memory card, hard disk drive or on DVD (depending on the camcorder), and can be transferred to your laptop in a mere matter of seconds in a digital format. This advantage is not there in older cameras. Flexibility: Being newer, digital camcorders come with loads of technological benefits. Based on the latest technology, they are more user friendly, and also have all the latest tech savvy features.

If you want to buy a Canon Vixia camcorder you will be able to benefit from a number of advanced features. It's important to consider all of these features when deciding which type of camcorder you should buy. Canon camcorders are also built to a very high quality, which will ensure that they will last for as long as possible.

The Canon Vixia series camcorders have a touch screen. This makes it very easy to control the camera. You can also zoom in by using the touch screen. The touchscreen interface is very responsive and easy to use. Vixia camcorders have the same features as many professional cameras. However, they are all packaged into a small case which makes them very convenient and attractive to use. The Canon Vixia camcorders have a very easy to use user interface. These include simple menus which makes it very easy to put the video camera into different modes. Most of the buttons are displayed on the LCD screen which means that only relevant buttons are visible.

If your camcorder is Canon Vixia HD camcorder, Vixia camcorders record in HD M2TS file which is also not supported by Mac player and editor. I.e. iMovie'11 doesn't support Canon HF M2TS for video stabilization or Mac with an Intel-based Core Duo processor limitation. Focus on playing and editing Vixia HF HD video on Mac, we'd better convert canon vixia camcorder to mac iMovie MOV, Mp4, FCP(X) DV formats.

Besides, Canon FS series camcorder shoot 720P/1080P high-definition video in MOD video format which isn't mac friendly format, if you want to want to play this MOD footage on QuickTime, edit in iMovie'11, Final Cut Pro X and Final Cut Express, the most effective method is to convert FS to mac compatible video format.

MOD converter for mac is suitable to all Canon FS series including Canon FS100, Canon FS200, Canon FS300 camcorder etc, which can convert Canon FS mod to mac, convert FS200 to mac, convert FS300 to mac MOV video format with fast conversion speed and good quality.
