Are you blessed with the computer expertise? Or can fix computer problems on your own? Probably, it's difficult to answer as there is a range of issues related to system software, applications, peripherals, drivers, Internet connectivity, router configuration and more. Problems might happen with new or old software/hardware products. Issues can jump while you are trying to install, activate, update, upgrade or configure the software or set up and configure printers or other peripherals with your PC or network.

Incompatibility or software conflict is the most common, and may happen with any software. The best way is to confirm that your PC meets the software's minimum system requirements. To ease your task, Microsoft brings Compatibility Advisor a free downloadable tool for each Windows version. Before you take plunge into installation and activation of any software or connecting any peripherals on/with your system, you can evaluate their respective compatibility running the aforementioned tool. Windows Event Viewer and the Action Center are important tools that can be used to fix computer issues. Explore the discussed tools to know which is the culprit or affected software. The former tool brings a set of logs or information panel under security, system and application headings. It brings all system activities at one platform, and any abnormalities can be depicted through it. Now, you can remove those incompatible software or program from your machine through the Windows Control Panel. Action Center is the right tool if you have encountered any security related errors. It also offers a "Fix" button to terminate the problem at the very beginning. Event Viewer can also analyze issues with the performance.

You can run PC repair tools such as Disk Cleanup and Disk defragmenter to handle problems pertaining to the hard-disk malfunctioning. Former would remove temporary Internet files and unwanted downloaded program files (ActiveX controls and Java applets downloaded from the Internet). It will also empty the Recycle Bin and Windows temporary files. The latter can organize your files, folders and programs on your hard-disk to generate extra space on it. Shedding away unused programs from the machine can also be a boost-up for your machine. You may also download third-party tools from Malwarebytes, PCTools and others, citing the system compatibility, and can perform a scan. Most of the software comes with built-in features that can take care of your Windows Registry as well. Go for the one which has a user-friendly interface to make your computing experience safe and enjoyable.

Nevertheless, computer technical support is available on-demand, if you are unable to get out of any computer problems. The service exists both from manufacturer or developer as well as from core-customer service providers. If your PC or laptop is within the warranty period then your manufacturer will entertain you with no cost. Hardware replacement is also on the card provided you haven't damaged the system from your ends or there are some default faults or manufacturing defects. Out-of-the-box PC help service from third-party surpasses all such restrictions, and it's getting more popular with today's contemporary lifestyle owing to their unlimited support plans covering all issues without any restrictions.
