A Number of Concerns You Must Reflect on About the BlackBerry Enterprise Server Express by [Samantha Cole](#)

Article published on May 16th 2012 | [Technology](#)

In order to survive in this demanding business world, you must be able to go with the capabilities of other companies already aboard. This implies that you must always have access to your work wherever you are. Thankfully for you, BlackBerry is here to help you do just that.

A software package offered by BlackBerry, the Enterprise Server allows the staff of big companies to get their work files, emails, and other work-related applications via their personal BlackBerry phones. This software is associated with other messaging and collaboration software like numerous Microsoft applications or the Lotus Domino Server. This lets personnel that are not in the office to handle their emails, book appointments, edit files, and employ business applications. Only a few businesses are able to afford this software though, and that's why BlackBerry launched the Enterprise Server Express for smaller businesses.

What does this indicate to owners of small businesses?

The Enterprise Server Express is basically meant to be the little brother of the original Enterprise Server. It is built on a similar system, and has most of the same functions and features. The distinction between the two is the price. Additionally, the Express version has less client access licenses, which means the number of individuals who can use the software.

What applications are supported by the Express version?

It would be far better to ascertain what programs aren't backed up by the Express version than those that it does assist. Certain premium programs that exist only in the complete version, such as Enterprise Instant Messaging Clients, BlackBerry Mobile Voice System, and Chalk Pushast software, aren't supported by the Express version. Apart from these, you can do almost everything.

What do I get?

If you acquire this software from a trustworthy vendor, the standard number of server CALs you will get would be 75, which means that 75 people can work with the software once it has been installed. You can also decide to include another 75 to this number if you want. All you have to do is add a few dollars in addition to your original purchase.

How does it benefit IT administrators?

The IT department of your company will also be glad to understand that they can also obtain over 35 IT controls and policies. They can gain access to a server client access license and wipe the phone from another location, or reset the passwords. The original version offers approximately 400 IT controls and policies.

You need a trustworthy server with enough server CAL capacity of your business, so why don't you employ this?
