Develop games for iPhone in just Four easy steps by [Robert William](#)

Article published on May 11th 2012 | [Technology](#)

Today iPhone plays crucial role in human beings life. Every day iPhone developers develop lots of new applications and games for iPhone and then the applications and games submit to iPhone app store. iPhone Game Development has helped so many programmers to create and develop their own projects. Create an interesting game for iPhone and connects them to iPhone can change the life and give the relaxation to users of iPhone.

To develop a game for iPhone through iPhone App Development there are easy steps and they are as bellow:

You should choose the right latest computer with Mac OS to create iPhone game:

For developing iPhone games, you should require Intel Processor and Mac OS X. There is requirement of internet connection through which you can use iPhone SDK. There is a iPhone SDK readymade available on the internet and you can download it for free from the developer site. It supports all things which can be useful for developing games.

You must need to learn the basic C language and do the practice:

You can be successful iPhone game developer if you have good knowledge of C programming language. You have good command on C or C++ programming language, you need to do is get familiar with the iPhone API. If you are at first step of this programming language, you can learn it from the basic books or from the online tutorials. You can get lots of experience from this.

You can do hard work by joining different iPhone training programs:

Once you have a clear cut idea to develop the iPhone game, you need to build the strong skill base to transform the ideas into an iPhone game. For that you need to join different iPhone training programs. You should register yourself on these programs and accept all terms and conditions of these programs to put your complete iPhone game on the iPhone store. If you have not completed the whole game yet you can register on that program and test the code on live iPhone mobile and check whether it works properly or not.

After completion of game submit your game on store and do marketing for it:

Once you have complete and develop the whole game for iPhone, you need to submit that game on the app store. If you have completed this game successfully, the game is approved and launches it on the internet very quickly. In the beginning you cannot make the record of sales but if you are doing marketing in the proper way, you can make that game attractive for the users.
