Electric Car News: the Biggest News an Automobile Industry Has Ever Given! by  
[Adeline James](#)

Article published on June 26th 2012 | [Technology](#)

The petrol prices are deflating everyone's pockets. Economy too, is not showing any sign of stability. There is confusion at every step and turn. Inflation is killing up the dreams of many. With this fluctuating economy, nobody would dream of buying a petrol-car or a petrol bike for instance. However, the revolutionary electric car news has aroused the interest of many. Another radical change was initiated with the hybrid car news. Especially, when the Government also is providing for such developments, the citizens do not think twice when they listen to the electric car news. The introduction of electric cars has reduced the dependence on fuels for their operation.

Global warming and pollutions has been the biggest matter of concern in the recent years. Scientists were of the opinion that if the carbon emissions along with other acidic emissions continue in the same way, there are chances that the citizens would no longer be able to breathe the clean and fresh air. Electric cars are the vehicles which are operated by one or more electric motors using various energy storage devices. The hybrid cars news revealed that the hybrid cars used two or more distinct sources of power for propelling the vehicle. While electric cars promise 0% emission, hybrid cars guarantees reduced emissions or rather ensures that the emission is less than the conventional internal combustion engine vehicles.

Such vehicles are largely known as "green vehicles". They promise reduced carbon emissions and also a reduced dependency on non-renewable resources such as petroleum and gas. There have been various sources through which the energy for the electric cars or the electricity can be generated at homes. It is possible through solar energy, normal electric valves, windmills, etc. Thus, generating energy is not much of a problem and even does not include an additional cost. However, the question which remains is the sustainability of that energy, i.e., for how much time that energy would last in the vehicle.

The electric car blog has highlighted the views, reviews, comments and suggestions of many people signifying its popularity across the world. Electric car blog also reveals that how and what measures different countries are taking towards such developments. However, the developing countries will still take a while to settle down with such new ideas and developments. Moreover, it also reminds all the electric car users about the different ways of recharging the cars and the latest developments in that area. Hybrid Auto Moto provides the much needed detailed information about the electric cars, hybrid cars and a lot more to all the drivers around the world!
