Environment Friendly Energy efficient lights and Led lights by [Louis Philips](#)

Article published on January 13th 2012 | [Technology](#)

Energy efficient lights are of two types such as CFL or Compact Fluorescent Lights and LED or Light Emitting Diode. Led light bulbs are solid light bulbs which are very much environment friendly. These bulbs last up to 10 times longer than CFL and much longer than a normal light. Leds are costly in the beginning. At first they were approved commercially and maintenance and substitution expenditure are pricey. But the asking price of new LED lights has decreased a great deal in the past years and is continuously going down.

Brilliant Led light is a store, which provide the supply of atmosphere friendly Led lights directly from the maker to the customers. Now a day the consumption of electricity has increased very much and become a cause of concern. So it is evident that the preservation of energy and lesser electrical expenses has become essential for every human being. Consequently all the manufacturers try to innovate all kind of energy efficient lights, as they are the only mode of lighting for the future. Our employees are eager to provide you with the most excellent illuminating services to act in response to this improvement. We have brought together various brands and forms of Led light bulbs, which are produced by famous manufacturers. These bulbs are available in a wide range of sizes and fashion. The clients can search for their kind of light in our site and we assure you will get the best lights available in the market. We give you the top quality of energy efficient lights within an affordable price and you can also get a guarantee from us for the products.

Led lights are more durable than any other normal bulb as these do not contain a filament and they are not broken under any situation. These bulbs are free of mercury, as it is not used in the making of these lights. Ordinary incandescent lights get hot if you put the lights on for longer time and build up heat in the room. Leds put a stop to this building up of heat, thereby decrease the expenses of air conditioning in the house. The efficiency of the Led light bulbs is much more than the ordinary bulbs since they use only 2-17 watts of electrical energy, which is 1/3rd to 1/30th of CFL. The battery life of Led light bulbs is more than 10 times longer than that of the luminescent bulbs. The customers now a day opt for using these types of lights more than before since they have the long time effect. Led lights are perfect to use in undersized portable generators, which are used by the homeowners for support during urgent situation.

The employees of our company constantly look for latest technology and try to understand the needs of our customers so that we can offer you the newest lights for your home and also for commercial use. Our Led lights can be replaced without any fuss, so there is no difficulty in changing it. You just have to remove your existing lights and substitute it with the energy efficient lights provided by us.
