How to Manage the Company Through a Blackberry Cellular Phone by [Kelly Brueggemann](#)

Article published on July 17th 2012 | [Technology](#)

Blackberry Enterprise Server (BES) is highly known as the most trustworthy entrepreneurial cellular phone organization method on the market. Through the years, the BES has encountered development on several elements of corporate management. It has been used by all types of firms, from the small-scale enterprises to the major companies.

The earliest Blackberry phones were commercial cellphones which enabled staff to receive their email out on the open instantly. The phone's system was deceptively simple. A BES is installed following the firmâ€™s demand. As soon as you are subscribed for the BB Enterprise Server, you can open particulars only available to your company. You would get the capability to communicate with the coworkers to boot, by means of a highly secure internal network.

The way BB Enterprise Software works

Once you turn on the phone, an authorized cellular phone number routinely logs on to the host. The minute the host finds out that your Blackberry phone has been turned on, it may deliver your firmâ€™s operation ledgers to your BB. Such service books are a lot like automated bosses that tell the Blackberry what to do and the way to connect with other gadgets.

The corporate Blackberry Enterprise Server could even initiate building encrypted shields to each Blackberry linked to it. Installing encryption will ensure that every info sent through the internal network is protected. A BES is constantly operating to ascertain that data runs securely and smoothly from the server to the Blackberry gadgets subscribed to it.

Functions

BES grants a specific set of amenities for the administrators and users. In the matter of managers, you could control what the prospects might view from the corporate server. You may even lock whatever amenities they donâ€™t need their employees to employ including Web browsing, Multimedia Messaging Service or Short Messaging Service features. Equally, you will be the person managing what server CALs your users could employ.

In the case of BES users, you could visit webpages, retrieve documents, and start meetings with a BB. Personal Information Management capabilities permit the user to synchronize your tasks, calendar, address book, and notes to be consistently updated. It is even possible to synchronize the Blackberry mailbox and your desktop computerâ€™s mailbox. You could believe that all of these is plausible with any cellular phone or enterprise server software ; however, using BES, you are rest assured that any information you send is secure and stable.

It is not only major companies that relish in the benefits of BES. Small-scale businesses across the planet may work with Blackberry Enterprise Server Small Business Release, that is simply BES in a minor scale.
