How to Pick the Right Laptop Battery by [James Blee](#)

Article published on March 21st 2012 | [Technology](#)

There are plenty of brands that supply laptop batteries. While some are expensive and long lasting, others are inexpensive and are purchased when you are on a tight budget. However, for long life and cost effectiveness, you should pick a laptop battery that is exactly right for your laptop. You need to pick branded batteries which are compatible for your laptop and are designed to provide the best possible performance. You need to make sure that you are well aware of the specifications which include the voltage supplied by the batters and the capacity rating in Ampere-Hours.

When purchasing laptop batteries, people look at OEM standards, where OEM stands for original equipment manufacturer. This makes sure that there are no incompatibilities when it comes to the battery and the laptop. However, you can go for higher capacity rating as that only means a greater runtime and has nothing to do with laptop compatibility. You can purchase replacement notebook batteries available on sale for much lower prices as well, but you need to be careful about the quality standards and the basic guarantee..

Not all batteries for laptops are expensive and it is possible to get batteries providing more than 5000 Ampere-Hours for around \$60 - \$70 for your branded laptops. Companies that buy and sell batteries in bulk can usually share the profits with customers, which is why you may get these batteries at a much lower cost than normal. However, you have to be careful not to go for refurbished batteries if you want a good life and are not just looking to save money. When buying new discount batteries it is a good idea to compare prices from different vendors.
