A guide on how to convert PSD to Joomla by [Justin Spencer](#)

Article published on March 13th 2012 | [Web Design](#)

Joomla is yet another open source CMS (Content Management System). You can explore the power of Joomla when you are in the process of building online applications that are powerful yet simple enough to use. This power-packed CMS is an award winning tool, is one of the best tools to help you publish your content online. Many businesses today have their own websites to reach out to a larger audience. Expanding the business horizons is the main aim of having a website in the first place. Joomla is one such tool that has exceptional flexibility and brilliant features. That is why PSD to Joomla conversion has gained so much importance. It is not only the importance that has driven it to be a popular CMS, but in fact, it has been adapted by many types of businesses - be they medium or even small.

Here are some tips for you to know the conversion from PSD to Joomla.

## Slicing of the PSD files

Web templates, which are used to get the designs from software like the Adobe PhotoShop, are first saved in the PSD type. When these files are saved in the PSD format, slice these image files into numerous layers. Conversion from PSD to HTML

## Conversion from PSD to HTML

To have this type of conversion, you will need several layers sliced from PSD. Once you are ready with this, you will need to code them with the help of easy to grasp, SEO friendly features. Another thing you need to use here is the PSD to HTML or CSS conversion. The HTML happens to be the basic language that is used for adding ease of access and interactivity to the PSD to Joomla template.

## Integration of Joomla to HTML

When you have finished with the PSD to HTML conversion, the next step is to carry out the HTML to Joomla or XHTML to Joomla customization and integration process. This is the core step where you can finish with a brand new Joomla website in a matter of moments.

The PSD to CSS/html conversion will allow you to have a more thrilling website that can easily stand out in the crowd of websites on the internet today. However, the conversion from PSD to a Joomla theme or a template is a tricky affair, though it is popular. It needs a skilled hand in doing the required steps that give a Joomla powered website a professional look.

You need an expert in handling this type of conversions as it needs to be done as carefully as possible. What you do not need is hiring a beginner or an over-confident programmer. When choosing or hiring a professional you should possibly have a look at his past work. If you have an eye for designing and the use of color combination, you can easily gauge the depth of the programmer you want to hire.

So if you are in the process of having a brand new website and want it to be user-friendly, the best possible option is to convert PSD to Joomla.
