Windows Vs Linux Web Hosting by [Ajay Kumar](#)

Article published on May 4th 2012 | [Web Hosting](#)

One cannot deny the fact that in order to have a successful web presence, choosing the right web hosting plan is a must. There are several things that go into website hosting and among them choosing an operating system is one of the crucial aspects. In the field of web hosting, Windows Server hosting and Linux hosting are the two most promising hosting solutions. Both these operating systems are among the most used and offer its users with distinct advantages.

Windows Hosting is one of the most trusted and widely used operating system all over the world. In fact the popularity of this hosting solution has grown mainly because of the enhanced security and convenience it provides to its user. It is known to be a very straightforward hosting solution, which makes sure that the software and hardware get easily compatible with each other. This hosting solution allows maximum compatibility with windows based software, as it has been exclusively been designed for this purpose only. It is also known to be very user-friendly for a new user.

A Windows platform also provides its users with several tools, so that they can check the effectiveness of the servers. One of the main benefits of a Windows Hosting is its ability to work with .Net and use Action Server Pages or more popularly known as .ASP technologies. Hence if you are building a website that is dependent on any of these languages then Windows Hosting is a great option.

Linux Web Hosting is also one of the more popular hosting platforms available in the market. It is rated very high with respect to strength and reliability it provides to its user. A Linux operating system can work at an ideal rate for long stretches without many problems, if partnered with the right hardware and other associated things. Another great advantage of Linux Hosting is its cost. Linux is much cheaper in comparison to other hosting solutions available today. Though there are several reasons for its cost proficiency, the biggest reason is that it is an open source platform. Linux Web Hosting has also become very popular as it supports various languages, such as C, C++, PHP, Python and Perl. The level of safety and reliability in this platform is also very supreme.

Selecting an operating system can get trickier at times. In order to make the right selection the user must clearly know what his requirements are.
