Wire Protocol ODBC Driver to Enhance Organizational Productivity by [Gyan Ojha](#)

Article published on February 8th 2012 | [Web Hosting](#)

It is undeniable that the need for high end storage solutions is rising at an uncontrollable rate. With every notable business having to rely on multiple databases in order to satiate its functions, it is safe to say that the need for efficient data management solutions has become simply paramount. Now, when it comes to the options companies have in order to ensure highly efficient data management, options such as DBMS (Database Management System) and RDBMS (Relational Database Management System) can prove to be extremely helpful; however, in order for such solutions to work up to their optimum efficiencies, the selection of a database driver plays an extremely critical role.

Considering the aforesaid, it will not be an overstatement to say that the efficiency of the database driver being used by a company is usually directly proportional to its overall efficiency. Here, although businesses can use classic Open Database Connectivity or ODBC driver to satiate the need; however, considering the limitations such drivers have, saying that they do come with certain grave concerns for the organizations will not be being judgmental. Issues such as the need for extra components, version control issues between databases and client libraries, performance bottlenecks and the like are always bundled with the implementation of classic ODBC driver solution.

So, what is it that firms can do to ensure their databases are managed in the most efficient way possible? Well, to give you in a nutshell, using "Wire Protocol"™ ODBC driver is likely to be the ideal solution. A substantial advancement over their predecessor, drivers using wire protocol give the companies ideal solutions for optimizing their database management solutions by eliminating all the concerns that come with their classic counterparts. By eliminating dependency on client libraries, such drivers facilitates impeccable data management across all renowned databases such as Oracle, IIBM DB2, Microsoft SQL Server, Sybase, Salesforce.com, MySQL, Teradata, and many more.

Owing to their exemplary performance and features, tailor-made ODBC driver solutions based on wire protocol are being offered by a number of solution providers. However, the increase in the number of options is obviously no certification for the reliability of the options available. Hence, in order to ensure that you go for a highly reliable database driver solution, it is extremely important to ascertain the competence level of the solution provider you are going with. In order to do this, you can simply evaluate the case studies and customer reviews published by all leading solution providers offering enterprise IT solutions.
