A brief journey through various phases of HCG weight loss by [Katie Joan](#)

Article published on May 31st 2012 | [Weight Loss](#)

In the last decade, countless new diet fads and programs have popped up all promising fast long-term weight reduction. Unfortunately, many of these diet plans cannot do the trick users want, that has dieters frustrated and eager to look for a true means to fix how much they weigh loss goals. Finally, a strategy to unwanted weight loss goals are available with the HCG diet plan.

HCG uses human chorionic gonadotropin (HCG), a naturally sourced hormone made by women that are pregnant plus a low-calorie diet. The primary purpose of HCG would be to facilitate development in a developing fetus. However, it plays a small role in lots of things and today has been accustomed to help overweight adults slim down.

HCG consists of three phases - the loading phase, the constant maintenance phase, and also the stabilization phase. The loading phase may be the early on that lasts 72 hours. In this phase, the consumer can eat whatever she or he wants. The primary reason for this phase it to organize your body for that low-calorie part of the HCG diet plan ahead.

HCG supplementation along with a healthy diet plan is definitely an amazing combination!

The constant maintenance phase may be the core area of the Everett HCG diet plan. This phase lasts between 21-42 days, with respect to the users'™ choice. Both low-calorie diet and HCG supplementation were designed and each aspect from the HCG diet plan is going to be explained below.

The stabilization phase generally lasts between 7-14 days. Throughout the phase, you need to gradually start upping your calorie intake every single day to slowly help the body adapt to consuming a normal quantity of calories daily. HCG continues to be for use during this period and can help make sure you are still slimming down.

Regardless of the sudden interest in HCG, it's been around because the 1950s. Dr. ATW Simeons, an english endocrinologist is credited for pioneering what's considered HCG. Dr. Simeons originally used HCG Glendale to deal with adolescent boys, who have been struggling with low testosterone levels.

After staring at the boys weight, testosterone levels, and the body fat mass, Simeons realized that the boys suddenly began to slim down at abnormal paces. Much more puzzling, Dr. Simeons realized that the boys were only losing excess fat. Actually, the boys experienced no muscle loss, even though a few of the boys had experienced a 10-15% drop in weight.

Simeons hypothesized that HCG stimulated the hypothalamus gland, that is accountable for regulating excess fat. By stimulating the hypothalamus gland, your body naturally started burning away more fat of computer previously was. This is exactly what causes the dramatic weight reduction a lot of people experience every week.

Dr. Simeons published his results and continued to utilize the HCG hormone within the next decade. Through his studies, Simeons created a diet regime and HCG supplementation plan which was shown to cause dramatic weight reduction both in men and women. Much more surprising was that his studies proved HCG Anaheim to become more efficient in causing weight reduction than dieting and exercise alone.
