Advanced Technology with Simple Techniques - Volcano Vaporizer by [Angelina Jennifer](#)

Article published on June 15th 2012 | [Alternative Medicine](#)

Vaporization happens only when the advanced digital microchip technology heats up the material and slowly releases pure flavours and active elements. Burning of the elements or any kind of smoke is released. The vapours are the only element which is released and which is pure. It's not harmful to human body in any way.

Hot air is blown through a disk implanted with herbal material such as tobacco or any other plant of your choice. The hot air induces the material in order to release full flavours along with active elements. This easy inhale vapour is achieved without burning any of the elements used in the disk. There is a digital accuracy to warn us if the material is over heated or wasted. The aroma and flavour is inhaled through the outer inhalation valve.
