Natural Gas Car Conversion – Natural Solution to Oil Crisis [By Angie Turner](#)

Article published on June 5th 2012 | [Auto](#)

Oil prices are on all-time high and burning a big hole in the monthly budget of each and every family under the sun. Now, long drives are a dream and vacation a mirage. Actually, the crisis is not going to end anyways soon and that is the real worrying news for all. When oil prices are linked with relations with Arab nations, things are never going to be on a smooth road.

However, there is a way out of every mess for those who try. If the oil prices are going to be where they are then people can try out the next best available alternative – natural gas conversion. This is one way of gaining control over the monthly budget.

The CNG kit comes cheap, installing it is not a worrisome job and then refilling it too is not as expensive as compared to the oil prices at the moment.

However, natural gas car conversion has its share of drawbacks in comparisons with the petrol-run cars; mainly it is in the speed and performance department.

When talking of speed, the natural gas car conversion running without air condition will give the same mileage as the petrol-run car with air condition on. The speed also for the petrol-run cars will be more than the CNG-run.

However, for those who are more conscious about the money than reaching a place late by few minutes, it is highly recommended to tryout the CNG.

One thing that needs to be noted is to go for an authorized dealer only, when you are to switch from petrol to CNG. You do not want to take the risk and go for some cheap kit, which can cause the risk of a explosion and cost you even your life. So, always go the legal way.
