Glass Sinks: the increasing Trend by [Angie Turner](#)

Article published on June 12th 2012 | [Business](#)

Glass sinks may not be a good option to be installed in earlier days. However, in the 21st century, glass sinks are becoming the style. Yes, with enhanced technology, quality of glass has improved substantially. They have become highly durable along with temperature resistant. These days most of the glass available is scratch and stain resistant. There is certain glass that is also totally shockproof.

glass sinks are normally made from totally tempered glass. This glass is three times stronger than stone. Moreover, they are also less expensive than stone. Due to these reasons, these types of sinks have become more popular among new age design.

Glass sinks add to the overall decoration of a house. They help in providing a distinctive, stylish touch to the environment. These days, many sinks are vessel centered. This means that the sink sits atop on countertop like a bowl. For the new generation style, such a concept is definitely much more refreshing and innovative.

Under mount based sinks are also available in the market. They capture the more traditional aspects but with a modern twist. In fact, the under mount sinks are more commonly installed within bathrooms. They are also seen within kitchens as well as bars. Those homeowners who want to make their kitchen or bathroom area look more trendy, they can opt for wet bar sink. These are quite conventional pieces to get installed within these areas.
