Solar Panel Installations could save you hundreds by Mary Porter

Article published on June 17th 2012 | Business

As energy bills continue to soar, many consumers are thinking about ways to cut the cost of supplying power to the home. Solar panel installations are becoming more and more popular in the UK, despite the preconception that our climate is not sunny enough! In fact, solar panel installations work almost as well here as in other sunnier climes. Power can still be generated by solar panel installations even on a cloudy day, although the amount of power produced wonâ€™t be as much as on a sunny day.

Solar panel installations are growing in popularity for a number of reasons. Firstly, and perhaps most importantly, is the affect they have on energy bills. Solar panel installations can dramatically cut your bills and their initial cost may be paid for within a few years thanks to the reduced bills. After solar panel installations, youâ€™ll usually still have an alternative power source which can be used when the panels have not generated enough energy. But instead of monthly bills eating up hundreds of pounds, your future bills may only set you back around Â£20-Â£30. Typically, bills will be reduced by around 40-50% as solar panel installations generate around 40â€”50% of the energy your home needs.

The environment is another popular reason for solar panel installations. As we learn more and more about the damaging effects of fossil fuels on the environment and, some would argue, witness the effects of global warming, many people are choosing solar panel installations as a completely harmless way to generate their energy. Fossil fuels also have a limited lifespan and will at some point run out. Solar panel installations will never run out and will continue to generate energy as long as the sun still shines.

The government are waking up to the benefits of Solar panel installations and help with costs is often available from your local council. The government solar panel installations scheme pays you to generate electricity. If your solar panel installations generates more energy than you need, it will be fed back to the national grid and you will be paid at a higher rate. The solar panel installations scheme can see you generate around Â£1,000 tax free income a year and payments are guaranteed for 25 years. This can help you recover the cost of your Solar panel installations quickly.

GSEnergyltd.co.uk are experts in Solar panel installations. Visit their website to see how you could benefit from free Solar panel installations, find out how much you could save on your energy bills and check whether your home is eligible for solar panels Dorset.
