How to buy a television and things you need to know? by [Treeves](#)

Article published on May 7th 2012 | [Communication](#)

Televisions have definitely come a long way in a short space of time. From the days, of five channels on clunky big boxes to the present day sleek flat screens with which you can surf the internet and do many more things is certainly a technological innovation. If you are looking to buy a television, then now is the time. We all know how to buy a television but how to find great television deals is the toughest task. There are few important factors involved in the purchase of a Television, whether it be a small LCD TV for the bedroom, large screen Plasma or projection TV, or the latest Internet-enabled or 3D TV. One of the most important things to do is to ensure you get a good deal. This can be done by spending a little time on research and learning few technical terms associated with television. It's worthwhile knowing what the important features are involved and how to use them. You can make a direct comparison with other brands and then choose the best TV.

Some of the TV terminology that you have to know is resolution, the type of panel -LCD/Plasma, contrast ratio, number of HDMI ports, high-definition tuner, viewing angle, 100/200Hz modes, Ethernet/USB/streaming and panel thickness. 1080p resolution is apt for home viewing and offers a great picture detail, including distance, the quality of your eyesight, and the quality of the video material. LCDs are very compact and light as well as come with low power consumption. This might save on your electricity bills. . There is little or no flicker depending on backlight technology and they can be any size. LED TVs produce images with greater dynamic contrast. They are more expensive, but they typically have 20 to 30 per cent lower power consumption. A plasma display and the screens are normally 30 inches or larger and offers a great quality TV viewing. Look into these factors when you are choosing a television for home purpose. Read the reviews and it might help to give you an overall picture of a television's performance.

It is even important to consider the warranty period being offered on TV. As television is one of the most expensive things it is worthwhile knowing that it will give you many long years of service. Modern day TVs are able to run for 10 years or more non-stop and you should not always expect that all TVs come with a long warranty period. Many companies offer extended warranties, and so if you wish, you can go in for getting extra coverage. Shop around and look for better pricing deals. The technology also matter when you want to get the best of the lot. At the same time do not fall for new stuff instantly when itâ€™s still in its infancy. Research a bit about the new stuff, make sure it is well accepted in the market and has got good reviews. Doing so, you might feel the extra cash is best saved than choosing new technology which you are not aware of. So, before you take the plunge, make sure of its worthiness.

There are a lot of TV brands to choose from and get the best quality product. The cost of the television does matter with the functions it is built upon and the features it supports. But the best time to get the best deal on TV is during holidays. You can get the TV as a present to your family and then again save on the gifts. Considering the size, resolution and screen technology get the best TV deals.
