Types of Security Cameras by [John Smith](#)

Article published on March 5th 2012 | [Computer](#)

Everyone has to depend on security surveillance system in order to stay away from criminal. Video surveillance is one of the best and safe security systems. The surveillance world is full of security cameras for different needs and applications. The key is to evaluate your mounting options, the areas you are trying to secure, and all special needs in an area, and then choose the right camera for your installation. Installing a surveillance system at the home or business is pretty easy task. Many home owners use local contractors for their installation or they just decide to take on the installation by doing it themselves. A surveillance system by itself is not overly-complicated! In fact, installing a security DVR and the cameras is really just a plug and play installation. The most challenging aspect is really understanding the different security camera types available and choosing the right ones for your particular application.

Types of security Cameras

Dome Cameras:

A dome camera can support any indoor or outdoor wall mount and ceiling mount applications. Dome cameras are very easy to mount and give you an aesthetically pleasing look! Outdoor dome cameras offer a vandal proof and tamper proof housing that will protect the camera from being damaged by passing people and extreme weather conditions.

Bullet Cameras:

A bullet camera offers complete flexibility with the ability to be mounted almost anywhere. This has made the bullet camera the most popular surveillance camera type on the market. A typical bullet camera is weatherproof, vandal proof, and tamper proof. Most people like bullet cameras because they add an intimidation factor to the presence of a surveillance system.

Covert Cameras:

Covert cameras are designed for hiding a camera in order to catch someone in the act of a crime or event. There are many covert cameras available that look like every day electronic devices. A covert camera works the same as any other security camera. Meaning their connections are the same and they install the same. Their downfall is that their features and camera resolution quality is often limited. But they are effective for close-up indoor surveillance applications.

PTZ Cameras:

A PTZ camera or Pan Tilt Zoom Camera allows you to have full control of the camera. You can use a joystick, remote controller, or Mouse to turn the camera in any direction you need. You can pan it left to right, tilt it up or down, or even zoom in on an object to so you can get the closest possible look. PTZ cameras are used in both residential and commercial surveillance applications. They are most popular in commercial settings where a security guard is manning a security station and using the camera to monitor large areas. The security professional or business owner can rotate the camera in any direction to watch particular areas, objects, and people.

A PTZ camera is not a cheap camera. It has a built in motor that controls the camera and also requires a high dollar lens for the zooming capability. PTZ cameras are available for indoor and outdoor areas. They are most common for securing warehouses, public areas, parking lots, malls,

hospitals, and schools.
