Choosing the Level of webcopy services Web Container Tracking System by [Francis Casey](#)

Article published on January 14th 2012 | [Ethics](#)

Efficient container tracking system includes a virtual workstation that allows you to send the correct information and goods flow. As an important tool in the supply chain, which is based on the web at this track, and the system provides a convenient and effective ways to track the location of the containers, the container number. As such, it is important to identify the critical benchmarks need to be a specific supply chain. These benchmarks can serve many purposes in the flow of information.

In addition, it is obvious that the security of goods arriving towards the end of time, there is the inevitable return to the ocean container. Many shipping container industry was built on the outsourcing of various companies in different parts of the process. Therefore, it is wise to choose the Web-based container tracking system that includes the return shipping container, as well as a comprehensive understanding of this part of the migration process: ocean carrier freight containers and chassis used to transport them.

They take the service contract with the producers of the port or container yard, the door of cargo or drayage companies, which perform the actual pickup and delivery, and although they are responsible for the shipping container, the consignee is responsible for handling time. Most ocean carriers to provide a limited number of free days during the containers are delivered to the customer's door, until they come back is usually 3 to 5 days after the last day, a per diem penalty is assessed up to \$ 250 per day is important to remember that day are free on weekends as well. This is a fee that is charged for additional days, known as demurrage charges, and can quickly become, without any expensive and do not know any other way.

Capture this data to the client that the necessary information in the near real time as possible, that is delivered by e-mail or any other type of electronic notification form, which identifies the number of days remaining, as well as Contact information for the trucker when they are ready to take : Ideally, a notice or delivery to the carrier for pick up from the Republic of Armenia trigger will be generated, thus creating a permanent record of the date stamp the transaction. ensure that this event will trigger the problem, and that the shipping container is returned to the correct time. A good Web-based container tracking system will provide the necessary tools to capture the critical dimensions, such as the return of empty containers for shipping.

Taking into account the active position of the returning shipping containers used to transport lead to a positive experience, that is, free of additional costs. . .
