Types of HDMI Cables by [Carol Brooke](#)

Article published on February 4th 2012 | [Hardware](#)

There are different kinds of long HDMI cable, having various specifications that people look for. No doubts, all the specifications play their role, but people usually, overlook the length of the HDMI cable that also, plays a significant part. In fact, it is the length of the cable that enables crystal clear signal, which is, expected of these cables. Thus, in simple words, when it comes to the clear signal output, then length of the cable plays the major part, in every sense and manner. In earlier years, analogue factor was used and may be people, today would not even be aware of it, any more. At those times, length factor did not have anything to do, with the sound or the video quality. In other words, there was no affect of length of the cable on output or input of the sound, as well, as video. On the other hand, when long HDI cable was introduced with this length factor, thus, proved to be pretty much significant. Difference between the older system and this cable system was obvious to the users, in a very short span of time. It is due to this fact that people who had short cables for them, came across a number of issues with the quality of the signals, as they start interrupting. But, with the help of continuous process of research and development, all such deterioration issues were sorted out. The fact remains; there that length of the HDMI cable has positive impact on the overall performance and output of the cable.

One thing, which must be kept in mind, while buying a HDMI cable is that it should not degrade the strength of the signals. One should always, buy certified 1m HDMI cable. These cables are certified, by reliable and well reputed company, which is, well known for manufacturing quality 1m HDMI cable. These cables are tested under strict supervision, before setting out, for sale. Once you will get the certified cables, thus, no doubts, the sounds and videos will be crystal clear. Most popular type of 1m HDMI has length of ten meters. Other cables are also, here with length of thirteen meters. It is also, a worth mentioning fact that strength of 1m HDMI cable, as well, as 2m HDMI cable is fixed to certain points. Latest version of these cables is 1.4 and it is used most widely, these days. 1.3a, 1.3b and 1.3 are also, acceptable by the users.

2m HDMI cable is the type of the cable, that is, even longer than thirteen meters. These are the cable that comes, along with, powerful amplifiers. These amplifiers are capable of giving additional clarity of sound, as well, as video. These amplifiers are necessary, as signals have to travel, from the long distances. Equalizing units are used to make up, the lost of the high frequency data. It is to be concluded that there is not any pre defined set of cables length and thus, one should always, do proper research, before buying these cables for use.
