Article published on December 21st 2011 | Hardware

So youâ€™ve been trading on a lousy computer system and now youâ€™re ready for something fantastic. With a customized trading computer, you can operate at quicker speeds without time lapses and crashes. Unlike with traditional computers that you find on the shelves of Best Buy and Sears, you will be getting the best quality components inside of your trading computer. A lot of manufacturers like Dell, HP and Gateway use low-end products to piece together their machines because they are cheap, allowing them make bigger profits. There arenâ€™t many big-name computers out today that are considered to be trading computers.

Just as a doctor wouldnâ€™t buy a scalpel from the dollar store, neither should a day trader purchase a system from the shelf of a department store. Instead, you should browse around for the best trading computers available. Finding one that wonâ€™t break your bank account and that is the best quality out there is the key. Too many day traders are being tricked into spending thousands of dollars on a trading computer system that doesnâ€™t even have the right parts to make it the fastest and most productive unit it can be. There are cheaper customized trading systems that you can purchase that have everything you can possibly need to maximize your ability to day trade efficiently.

Day trading systems are known for having great power and speed. The combination of power and speed is just as deadly in nature as it is in the stock market. The slow and weak get devoured by the quick and mighty. To transform your trading station into something that you can be proud of, you will need a computer that has a fast processor and large amounts of memory RAM. Youâ€™re operating multiple programs at once and will need this speed to be able to get around quickly. Multiple monitors also couldnâ€™t hurt. A lot of day traders are using multiple monitors, and have been doing so for years. Just make sure that all of your monitors are the same brand and model.

The components that you want to look for in a trading computer should all have high quality brands and capacities. For your multi-monitor system, you should go with Asus and Samsung brands. Then for your graphics card, you may want to go with an ATI model like the FirePro 2460 OCle 2.0x16. Having a great graphics card to go with your multiple monitors will ensure that you have the best visuals. Then a fast processor and sufficient memory RAM will give you the productivity that youâ€™ve been craving. And all of this doesnâ€™t have to cost you thousands.
