Chlorhexidine Gluconate 0.12%

by Sophie Goldsmith

Article published on December 30th 2011 | Health

With the development of the science of dentistry, the industry of dental supplies and products is flourishing. In order to help you make the right decision about which of these products is most suitable for you, here is some information about a fairly common one:

chlorhexidine gluconate 0.12 % is a mouthwash that is used daily to treat a gum disease called gingivitis which causes swelling and redness of the gum.

How does it work?

chlorhexidine gluconate 0.12 % decreases the amount of bacteria in the mouth. This reduces gingival inflammation and bleeding due to gingivitis.

How do I use chlorhexidine gluconate 0.12 %?

Rinse your mouth with the solution for about 30 seconds after brushing your teeth then spit it out. Be careful not to swallow it!

Heads up!

Before you start on chlorhexidine gluconate 0.12 % donâ€™t forget to tell you dentist or pharmacist about any allergies you have. Also, make sure you inform them of your medical history (fillings, dental crowns, veneerâ€¦etc). If you are pregnant, do not forget to mention it to your doctor as well.

Dental supplies should be stored carefully and under certain circumstances to insure their effectiveness. chlorhexidine gluconate 0.12 % should be stored away from light and moisture at room temperature.
