There are many types of washers in the market that cater to the different needs and application. The available range of washers is to allow consumers a better choice of insulation washers to connect between pairs of incompatible metals as well as provides for electrical insulation.

Features

Most of the nylon washers that are used in the industries are shoulder washers types which are utilized in mechanical applications and various forms of electrical insulation. Shoulder nylon washers are able to lower the amount of vibration felt on the component they are applied on; these are corrosion resistant products that offer strength and durability for the duty they were designed for. There are basically two types of shoulder nylon washers: flanged or standard design.

Other offerings

There are other types of nylon washers for various types of industrial or domestic applications; they include flat nylon washers, spacers and insulator nylon washers. Newer and expanded nylon washers are designed and marketed from time to time to offer better strength and longer durability. Newer designs of nylon washers are constantly being developed according to the progressive technology and industrial demand such as metric spacer nylon washers and flanged shoulder nylon washers.

There are always some new nylon washers and insulation added to the current product range. The myriad of sizes and styles of nylon washers is made available to fit any industrial or domestic application.

Purchasing nylon washers

Good quality nylon washers are not hard to find. They can be purchased easily from the local hardware stores in the neighborhood or ordered online for those who are computer savvy. It is easy to purchase nylon washers online from any reputable hardware retailers that have an up-to-date website.

Bulk orders of nylon washers can enjoy a good discount as well as store delivery depending on the retailer's policy. The online screen is easy to navigate and the information about every piece of available nylon washers is on the screen for the purchasers' consideration.

Quality nylon washers can come in white or any other color to add a distinct look to the component pieces while making a clear identification of the nylon washers' function. Nylon washers are quite cheap as well as lightweight to fit most materials.

Uses

Nylon washers are designed to have a low friction coefficient that allow light load bearings so that they can function as locators, glides, sleeves and liners. They are excellent electrical insulators to prevent any metal-to-metal contact that may cause sparks or friction.
