Medical Bins Necessary to Maintain the Hospital Hygiene by [Mike Nicholson](#)

Article published on April 12th 2012 | [Management](#)

Much has been talked about the insufficient hygiene conditions of the hospital and due to that the spread of contagious diseases happen. When the importance of hygiene has been talked about everything is maintained but one very important thing is always neglected. They are the medical waste bins that are overlooked and it is the most important factor to be considered in hospitals.

These Community waste bins, Waste Collection bins are of utmost importance as they contain a lot of waste elements and there are also traces of other bodily fluids present in them. This in fact can be affected by further injections of microbes present in them. These hospital bins are not similar to the waste bins as these bins have to follow a stringent regulatory policy. There is also a requirement for fire retardant bins as there can be any kind of emergency that can be caused in an hospital so all kinds of safety precautions needs to be kept in mind. The health and safety of the patients are of utmost importance.

These fire retardant bins are required in the hospitals and most often they come in the form of sack holders as they are specifically manufactured with high density polypropylene. Using this material will help in retarding the fire but it also comes with anti-bacterial and anti-microbial qualities that will help in preventing the spread of diseases and various infections.

The bins that are used in hospitals have the requirement to be color specific and they need to be coded in different areas and in different colors. The common colors that are used to code the bins are yellow, orange, white and black. It helps in the prevention of contaminated waste elements like bandages that would end up in a landfill.

There are some other things that need to be considered for the hospital bins. There are many bins that are used in the hospital that are used for the purpose of sack holder and they have pedals and sensors too. It prevents the requirement of the handle. So with a pedal fixed in a bin it becomes easier for carriage as it is not desirable to carry the bin where there is infectious materials used in it. It becomes a reason for further spread of infections. While installing the bins other important factor that needs to be considered is that these bins should be sized adequately. The proper usage of Medical Waste Bins, Community waste bins, Waste Collection bins will result in better hygiene.
