Benefits of using a Leased Line solution by Ajay Kumar

Article published on March 19th 2012 | Networking

There are a number of ways via which a user can connect to Internet. As a business starts to show some promise, the significance of internet also increases. In order to have a consistent growth, it is very essential for businesses to have a stable internet service. When it comes to dependability of an internet connection, a Leased Line is considered to be the most suitable of all.

A Leased Line is a point to point connection that can be used to link several places with one another. By using these dedicated lines a business can set up an efficient communication channel via which they can communicate successfully within its branches. This connection is especially beneficial to enterprises that heavily rely on internet, as these private lines can reduce costs, while providing high-quality web solutions. This connection is said to provide businesses with complete value for money and symmetric connectivity. This solution is usually available in a number of bandwidth options.

Internet Leased Lines are very highly regarded by organizations mainly for their cost-effectiveness and consistency. It is mainly used by organizations that need enhanced security while transmitting data. The biggest benefit of this dedicated line is that it ensures that its user can keep his data intact, unlike in a normal connection where there is a constant threat of losing communication capabilities. Another advantage of an Internet Leased Line is that it can also provide Internet Telephony or more popularly known as voice over internet protocol (VOIP) services. This technology allows users to make voice and video calls through the Internet. This service has gained popularity mainly due to the reason that it is very well-organized and helps a business in reducing its overhead costs.

Once an enterprise decides to install this private line they can enjoy uninterrupted and reliable data transfer services. This service not only increases the speed of data transmission, but also helps in saving a lot of time. It also provides users with constant upload and downloads speed. It usually comes along with a service level agreement (SLA) that assures the user with guaranteed bandwidth.

Most businesses in India have also realized the benefits of having this dedicated solution. Leased Lines are now easily available in Delhi, Mumbai and Kolkata. As this service is solely dedicated to a single user, it has a high installation cost. So before deciding on installing this service a business is recommended to check its need.
