Article published on December 3rd 2011 | Real Estate

Designing your own swimming pool can be a challenging and fun activity. To start with visit the local bookstore and read through several publications that highlight the most recent trends in this field. Be pragmatic about how much money and space you can set aside for this project. Focus on designs that match your property, not only in size, but in fashion and splendour. A grand swimming pool is a compilation of decking, landscaping, and architectural elements.

Pull together enough garden strings to approximate mark the perimeter of your future pool. Most pools have a perimeter of around 120 feet but noticeably, you may want more or less. Have a nice long measuring tape on and gather up a small amount of pieces of outdoor furniture that bear a resemblance to what you may eventually want to accommodate at poolside. Using the garden string, design the virtual pool edge in the shape and location you have in mind. Measure the proximity to the base of your house and any other structures.

Decking can be costly but it often makes the pool much more functional. Set aside some outdoor furniture in likely spots around your pool and see the layout. Another important concern is the position of underground utilities. Most utility companies can complete paint lines in your yard to mark the gas lines, water lines, and any underground electric runs. Sewer lines and septic systems can be extremely difficult to figure out it is important to locate them. If you have slide electric or phone lines in the pool area, you may also need to consider the height of the equipment needed to excavate the pool.

Finally, consider the room needed for nice landscaping. Whether you do it with the pool construction or add it later, a site plan will ultimately outline the project and create the needed connection to the rest of the backyard. Always remember to include any needed additional external water pipes and electrical sources for sprinklers and lighting. It's much cheaper to trench through the ground earlier than your pretty new pool deck.
