Web Search Tactics Black or White by Stella Richard

Article published on January 11th 2012 | Seo

As part of the Internet marketing strategy SEO Vancouver has provided many businesses the leap in attracting audiences.

While some have earned a lasting impression, others have shut shop due to use of deceiving methods.

SEO Mal practices or Black Hat SEO schemes to be wary of:

â€¢ Inserting keywords excessively in your webpage content might just yield you some results in a short time for you but they might not be most relevant. Also by doing so the risk of getting spotted by a Search Engine gets higher. By forcing keywords into the content can also annoy readers and hurt your credibility.

â€¢ Presenting content to a search engine different from that visible to the user also known as clocking is claimed unethical under the SEO guidelines. These sites would not be approved to display for its violating content and any one using this practice can be penalized or withdrawn.

â€¢ The technique of adding invisible text or text colored identical to the background can be very deceiving for the web browsers. Users can make a complaint and such content could be regarded as spam.

â€¢ Creating inbound links that are irrelevant can cause huge damage to your readership. Content that is informative and significant is valued highly.

â€¢ Using hidden pages also known as doorway pages, jump pages, bridge pages and gateway pages are used to trick search engines into indexing the website. Visitors are thrown off to an entirely different page having no relevance to their search. This method increases false viewership rating thus resulting in higher indexing of the website.

â€¢ Website Pop ups springing with no way to cancel unless viewed, this is not only unethical but also upsetting for the viewer.

â€¢ SEOâ€™s claiming to submit your website to countless search engines is defying your trust. For the reason that only a handful of search engines exist who would determine the rating of your website index.

Gains from Black Hat SEO are limited for a very short while, it is best to avoid such ruse and reap enduring profits by meaningful optimization.
